ADVERTISEMENT.

The following Catalogue exhibits at one view, in systematic classification, a great number of Subjects of Natural History, in the Zoological Department.

The System is, generally, that of LINNÆUS, the exception being in the Class Insecta, which is arranged according to FABRICIUS, with a further deviation, under the authority of CUVIER, by which the Genus Cancer, is withdrawn from the Aptera of LINNÆUS, and the Agonata of FABRICIUS, to the Class Vermes, under a new order Crustacea.

Each article is arranged in the following order, viz—First, the Figures which correspond with the numbers affixed to the Subject in the Museum. Secondly, the Generic and Specific name in Latin. Thirdly, the commonly received name of the same in English. Fourthly, the Habitat or Place where found.

The Miscellaneous part of the Catalogue includes a variety of curious Antique Remains ; also Indian Ornaments and Arms, with many ingenious works of Art.

The Index at the end directs to the different Places in the Museum, to which the Catalogue refers.
